Sample questions: EXAM 2

contingency table has value 32 in the cell in row 1 and column 1. This means that if the variables were independent, it would be very unusual to observe so many observations in that cell. 9. Suppose that a study reports that a 95% confidence interval for the difference $\mu_1 - \mu_2$ between the population mean annual incomes for whites (1)

Repeated measures vs. independent groups

Repeated measures vs independent groups: There are two kinds of t-tests and two kinds of Anova tests: one for independent groups and another for what is called "repeated measures" or "correlated measures". The distinction is very simple. In an independent groups test, the subjects in the 2 groups or conditions (t test) or 3 groups, 4
